Scientists in Social Media Project

Create a FAKE social media / text account for one of the given scientists. Develop account activity based on what you think the scientists would be talking about... (don't worry that they may not have been alive at the same time... lets just get them talking)

Requirements:

- Minimum 4 scientists involved in conversations
- Minimum 20 posts / comments / pictures for the project
- Discussions must be based on research and information that the scientists would have been involved in (but making them interesting or funny helps)

Marking Rubric

	4	3	2	1
Scientists Involved	4 or more scientists are included in the discussion	3 scientists are included in the discussion	2 scientists are included in the discussion	1 scientist is included in the discussion
Number of Posts	More than 20 posts were included in the discussion	15-20 posts were included in the discussion	10-14 posts were included in the discussion	1-9 posts were included in the discussion
Information on Posts	Discussions were scientific and included information relevant to scientists involved	Discussions were scientific and included relevant bonding information however 1 of the scientists included are irrelevant	Discussions were scientific and included relevant bonding information however 2 or more of the scientists included are irrelevant	Discussions were not scientific and/or had nothing to do with the scientists involved
Interest	Discussions were entertaining, funny and interesting. I would follow this discussion	Discussions were entertaining and interesting, however I would probably not follow this discussion.	Discussions were interesting however lacked that *grabbing interest.	Discussions were boring and or bland and therefore I would not follow this discussion at all.
Format	Format is exceptional. The project looks as if it is right off the social media site.	Format is well done, 1-2 differences allow the knowledge that it is faked	Proper formatting has been attempted, however major flaws in format	This project does not look like any social media site I have ever seen.
